

Nanjing Solglass Science & Technology Co Ltd is committed to ensuring that there is no forced labour in our supply chain. We recognize that the use of forced labour is a serious human rights issue that affects millions of people worldwide, and we are committed to doing our part to prevent and eliminate it.

As part of this commitment, we have implemented several measures to identify and address any potential risks of forced labour in our supply chain. We require all of our suppliers to comply with our Supplier Code of Conduct, which prohibits the use of forced labour and outlines our expectations for fair labour practices. In addition, we conduct regular audits and assessments of our suppliers to ensure compliance with these standards. We also support the use of renewable energy sources, including solar, as a way to mitigate the risk of forced labour in our supply chain. By investing in renewable energy, we can reduce our reliance on fossil fuels, which are often associated with forced labour and other human rights abuses.

We are committed to ongoing improvement in our efforts to prevent and eliminate forced labour in our supply chain. We will continue to work with our suppliers, industry groups, and other stakeholders to identify and address any potential risks and to promote fair labour practices throughout our supply chain. Nanjing Solglass Science & Technology Co Ltd is committed to upholding the highest standards of ethics and integrity in all of our business practices. We believe that by working together, we can create a more sustainable and equitable world for all.
